ABSTRACT OF THE DISCLOSURE

An image data communication apparatus is connected to an image data source and to a network, and transmits image data attached to an e-mail to a receiving apparatus via the network. The e-mail including a mail from command and a mail message. The image data attached to the e-mail as an openable document. The image data communication apparatus comprises a memory which stores a default information and a panel section configured to input information regarding an identification of a user into the image data communication apparatus. The image data communication apparatus comprises a controller which sets the default information into the mail message of the e-mail to which the image data is attached when the information regarding the identification of the user is not input by the panel section, and sets the information regarding the identification of the user, input by the panel section, into the mail message of the e-mail to which the image data is attached when the information regarding the identification of the user is input.
